

Position on Product Safety

Introduction

At Chr. Hansen product safety is and will continue to be one of the company's top priorities. We want to deliver products that are safe for consumption by the final customer. We will under no circumstance make compromises on the safety of a product and every effort must be made to avoid hazards to health.

Good manufacturing practice (GMP) is a crucial fundament for our food safety program.

Statements

Good Manufacturing Practice

- We will maintain a high level of GMP. We consider GMP requirements to be the prerequisite program for managing conditions that contribute to the overall safety of products at productions sites and warehouses

Risk identification

- We will use science-based risk identification to prevent potential hazards from ingredients, packaging, manufacturing processes or finished products.

Risk management

- We apply the Hazard Analysis Critical Control points (HACCP) system in our production operations.

Value chain

- We build in product safety from product development continues through production and distribution to product use.

Traceability

- We require 100% traceability on all our products.

Product alerts

- We manage product alerts quickly and effectively to prevent or eliminate the potential adverse impacts and to prevent potential impacts from escalating into larger crises.

International product safety standardization

- We actively contribute to the international development of product safety standards.
